PRODUCT FACT

- Huntonit pre-painted wall and ceiling panels are produced in Norway with nothing but pure natural wood fibers. The fibers are compressed and fused together in a heat and water process with no additive substance
- The panels are treated with five coats of environmentally friendly water-based acrylic paint. Finishing layer is a protective coating
- The panel has fire- (D-s2,d0) and sound-absorbing effect (sound diminishing cladding). Technically approved by SINTEF and may be used in REI30- and REI60- structures
- The panels are dense, making it possible to install screw-fixed bookshelves and lamps directly on to the panels
- Recommended by the Norwegian Asthma and Allergy Association (NAAF)
- Holds the Indoor Climate Label

Wood Single panel Skygge installed on wall and Mist in the ceiling

BRUSH PAINTED

SINGLE PANEL BOARD

Single panel board with brush painted surface and wood structure. May be used horizontally or vertically onto ceiling or the wall. Short side extension with V-fas provide a clean appearance where panels need to be spliced, maximum coverage beyond 2400mm.

PRE PAINTED PANEL BOARD INSTALLATION

Before installation: check the panel for any damage or difference in color.

Huntonit is a natural product made of wood fiber pulp; variation in color and appearance may occur. It is recommended to use panel from the same production or batch number.

3. Mount across electric beams/beams with a max distance c/c 60 cm. When mounting on existing roof; test if the material has the strength to fix the screws. If not; locate the beams and fix the screws to them.
4. Cut to the first panel according to the correct width. When cutting with circular saw, the painted side should face down.

- 3/4. Fit blocks in inside and outside corners.

5. Mounted the first row after string / chalk cord for a straight start.
NB: mount with approximately 10 mm distance to all walls.
6. Distance to wall and between nails; c/c 150 mm. Double nailing/screw on each beam.

5. The first panel is cut and mounted at a distance of 10 mm from the floor and ceiling.
6. Use a leveler so the installation gets a right start.

7. To avoid damage to the panel, use a nail setter when using nails.
8. The panel is to be spliced at the beam and should not be glued.

7. First panel on a new wall should be glued with Casco superfix or PL 400.
8. Double nailing/screw on each leak/beam.

9. Mount the rest of the panel.
Tadaa - your new ceiling is done!

9. Use correction paint delivered in 20 ml to cover marks made by screws and nails.
10. For external and internal corners; use Huntonit's corner profile.

You may mount recessed down lights in all our ceiling panels. You can also install our panels in wet rooms, provided normal ceiling height and good ventilation is available.

11. Tadaa - your walls are done!

PRE PAINTED PANEL BOARD INSTALLATION

HORIZONTAL WALL MOUNT

1

1. Distribute the panel so that top and bottom panel become equally wide.

2

2. Acclimatize the panel, in the packaging, for two days at room temperature before installation.

3

3. Mount across studs with a distance of max cc 60 cm. When mounting on existing wall; test if the material has the strength to fix the screws. If not; locate the beams and fix the screws to them.

4

4. Cut to the first panel according to the correct width. When cutting with circular saw, the painted side should face down.

5

5. Mount the profiles of your choice.

6

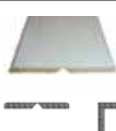

6. Tadaa - your walls are done!

⚠ Byggma ASA is working hard on quality control. Despite this quality assurance, some errors may occur. The user must check the panel before mounting - in which our liability is limited to replacement of faulty panels. The manufacturer reserves the right to alter specifications when changes and printing errors occur.

WALL AND CEILING ACCESSORIES

Huntonit pre-painted wall- and ceiling are supplied with tongue and groove for quick installation and hidden nailing gives a assured result. Mount on existing wall or directly onto stud Huntonit pre-painted wall- and roofpanel are the only pre-painted product recommended by the Norwegian Asthma

and Allergy Association. Huntonit panels are also approved with Indoor Climate Award from the Danish Technological Institute. Huntonit product is equip with M1; Emission classification of building materials, by the Building Information Foundation RTS.

 <p>CORNER CLIPS Use this corner clipp when mounting our panel and avoid visible staples in the corners. NB! OTHER INSTALLATION TIPS

In the inside corner the last panel may be attach to the stud with construction adhesive. If so you do not need clips or nailing. If last panel is installed against an outer wall with plastic wrap, one can not use adhesive. The panels may also be glued to brick/concrete. (see our installation instructions).

In buildings where there high demands on cleaning, eg. public buildings, institutions, etc., a base profile may be used to protect the edge of the panel. This solution is used when the panels need to be lifted off the floor (ex. 50mm.).

Huntonit pre-painted wall- and ceiling panel are equipped with tongue and groove for quick and easy installation with concealed nailing. The joints shall be glued. Nail distance: 150 mm.

PRE PAINTED WALL PANEL INSTALLATION

Before installation: check the panel for any damage or difference in color.

Huntonit is a natural product made of wood fiber pulp; variation in color and appearance may occur. It is recommended to use panel from the same production or batch number.

1

1) Acclimatize the panel at room temperature, for 2 days, and install immediately after the package is opened. Mount across electric beams/beams with a max distance c/c 60 cm. May also be mounted on horizontal beams (c/c 60 cm). Each mount should then be fixed with double nailing/screw on each beam.

2

2) Cut to the first panel according to the correct width. When cutting with circular saw, the painted side should face down.

3

3) Use a leveler so the installation gets a right start.

4

4) Mount the panel 10 mm from the floor / ceiling. Tip: Place 2 blocks under the wall plate to facilitate the installation.

5

5) Distance between nails; c/c 150 mm. To avoid damage to the panel, use nail setter when using nails. In the first corner, the nails will be hidden by the last panel mounted. Cramps and screws may also be used.

6

6) Do not glue the joints. Next plate is put in place. The wall plates are supplied with groove, spring and v-joint for concealed nailing.

7

7) The spring side of the plate is inserted into the groove.

8

8) This provides a concealed joint that does not need to be glued.

9

9) The last panel towards the next corner is cut. When cutting with circular saw, the painted side should face down.

10

10) Last panel towards the corner is nailed along the cornerside. These nails are hidden by the 1st plate on the next wall. Cramps and screws can also be used (see also mont. M004-01-04).

11

11) Cut the first plate, according to the correct width, for next wall. Corner clips are used for concealed nailing at the inside corner. Affix the corner clip completely into the plate. Use 3 corner clip alongside the panel and a nail at the top and bottom of the panel. These nails will be hidden by cornice and skirting.

12

12) The next first panel is placed tightly in the corner and tapped in place at each corner clip.

PRE PAINTED WALL PANEL INSTALLATION

13) Protect the panel with a shim when you knock it in place.

14) Make sure the panel is completely knocked in.

15) The panel is nailed in the nail lip. In the corner, the panel is nailed visibly with dive pins (by hand). Secure top and bottom as usual. Use correction paint (in correct colour) to cover the visible nails.

16) The rest of the panels are mounted in the same way.

17) At external corners use the Huntonit corner profile

18) Staple the corner profile (c/c 300mm) and cover the staples with the correction paint. Correction paint is delivered in 20 ml to cover marks made by screws and nails. Available in different colors. To be used sparsely due to visual difference in surface structure.

19) This provides a perfect external corner. The external corner profile may also be glued on.

20) Huntonit also deliver Akryl Filler in original colours. To be used in internal corners.

21) When akryl filler is used we recommend a joint kit that is perfect for this purpose.

22) Huntonit can provide a special profile. This is for use on windows and doors where a second board layer are mouted (renovation). Available in primed white.

23) Molding paint, 1/2 liter, is delivered in different colors to match the color of our panels.

24) Huntonit panel is available in several types and colors, and with accessories that make the job easy and give a professional result.

PRE PAINTED CEILING PANEL INSTALLATION

Before installation: check the panel for any damage or difference in color.

Huntonit is a natural product made of wood fiber pulp; variation in color and appearance may occur. It is recommended to use panel from the same production or batch number.

1) Acclimatize the panel at room temperature, for 2 days, and install immediately after the package is opened. A drawing is made prior to installation for calculating the consumption of roof panel.

2) The principle of the drawing is to show the best solution of the pattern in the ceiling and how the panel must be adapted before mounting. Keep the distance to walls and fixed points at 7-10 mm.

3) Mount across electric beams/beams with a max distance c/c 60 cm. All panel edges without adjacent panel must be supported. When installing narrower ceiling panels, the beam distance must be adjusted to fit the width of the panel.

4) Cut to the first panel according to the drawing. When cutting with circular saw, the painted side should face down.

5) Mount the first row after string / chalk cord for a straight start. Distance to wall and between nails; c/c 150 mm. NB: mount with approximately 10 mm distance to all walls.

6) To avoid damage to the panel, use nail setter when using nails. Cramps and screws may also be used.

7) The panel is to be spliced at the beam and should not be glued. Distance between nails; c/c 150 mm. Avoid damage to the panel, use a nail setter when using nails. Cramps and screws may also be used. (see mont. M005-08-04).

8) To find the length of the 1st panel in the second row, subtract 60 cm from the length of the 1st panel in the 1st row.

9) Measure and mark the 1st panel in the 2nd row. The excess part is cut off. When cutting with circular saw, the painted side should face down.

10) Mount the rest of the panel. Tadaa - your new ceiling is done!

11) You may mount recessed down lights in all our ceiling panels. You can also install our panels in wet rooms, provided normal ceiling height and good ventilation is available. (For down-lights, see NBI 543.615).
